

Detail Product of PT Listrikum

Mini Hydro Power Plant

Spesification

A Mini Hydro Power Plant (PLTMH) is a renewable energy solution that utilizes river or irrigation water flow to generate environmentally friendly electricity. With its compact design, high efficiency, and low operational costs, PLTMH is suitable for supporting village electrification, small industries, and off-grid needs. Available in various capacities (mini hydro power plant is between 100kW-1MW), this system is capable of providing a stable, sustainable energy supply and supporting the achievement of green energy targets.
